

FNP Sales Analysis Dashboard – Project Summary

1. Problem Statement

- Businesses generate large amounts of sales data, but **raw transactional data is difficult to analyze and interpret** directly.
- The absence of a centralized dashboard makes it difficult to monitor **sales performance, revenue trends, customer spending, product performance, and delivery efficiency**.
- Business teams need an interactive solution to identify **high-performing categories, peak sales periods, popular occasions, and locations with higher order volumes**.
- Therefore, this project aims to develop an **interactive Excel Sales Analysis Dashboard** that converts raw sales data into clear and actionable business insights.

2. Project Objective

- Analyze overall **sales and revenue performance**.
- Monitor important business **KPIs**.
- Identify **top-performing product categories**.
- Analyze **monthly and daily revenue trends**.
- Compare sales performance across different **occasions**.
- Identify **top cities based on order volume**.
- Analyze **customer spending behavior**.
- Evaluate **order-delivery performance**.
- Provide interactive filtering for better business analysis and decision-making.

3. Project Overview

- Developed an interactive **FNP Sales Analysis Dashboard using Microsoft Excel**.
- Processed and analyzed sales transaction data containing **1,000 orders**.
- Generated approximately **₹35.21 lakh in total revenue**.
- Created a centralized dashboard containing multiple KPIs and visualizations.
- Used **PivotTables, PivotCharts, calculated columns, and interactive slicers** for analysis.
- Designed the dashboard to provide a simple and user-friendly view of business performance.

4. Key Dashboard KPIs

- **Total Orders:** 1,000
- **Total Revenue:** ₹35,20,984
- **Average Customer Spend:** ₹3,520.98
- **Average Order-Delivery Time:** 5.53

5. Key Analysis Performed

- **Revenue by Category** – Compared revenue generated by different product categories.
- **Revenue by Month** – Identified monthly sales trends and seasonal fluctuations.
- **Revenue by Day** – Analyzed sales performance across different days of the week.
- **Occasion Analysis** – Compared sales across occasions such as Birthday, Anniversary, Diwali, Holi, Raksha Bandhan, and Valentine's Day.
- **Top 10 Cities by Orders** – Identified cities generating the highest number of orders.
- **Product Analysis** – Evaluated revenue performance across individual products.
- **Customer Spending Analysis** – Monitored average spending per customer/order.
- **Delivery Analysis** – Evaluated order-to-delivery time to understand delivery performance.

6. Tools & Technologies

- **Microsoft Excel**
- PivotTables
- PivotCharts
- Slicers
- Excel Tables
- Calculated Columns
- Data Cleaning & Transformation
- Data Visualization
- KPI Analysis

7. Business Insights

- Identified **Colors** as a strong-performing product category in the analyzed data.
- Observed significant variations in revenue across different months.
- Identified **Saturday** as a strong revenue-generating day in the displayed analysis.
- Compared customer demand across different occasions to understand seasonal/event-based purchasing behavior.
- Identified the **top cities by order volume** for understanding geographical demand.
- Evaluated delivery time to provide insight into operational performance.

8. Business Value

- Provides management with a **single view of sales performance**.
- Reduces the effort required to analyze raw transactional data.
- Helps identify **sales trends and high-performing products/categories**.
- Supports better **marketing and promotional planning**.
- Helps understand **customer and geographical demand**.
- Supports **data-driven business decisions**.
- Makes sales monitoring faster through interactive filters and visualizations.
